

DROUGHT

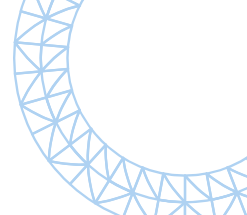

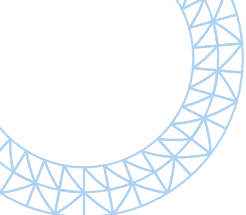

**BY: LAMIYA
EASLEY**

HOW DOES A DROUGHT FORM

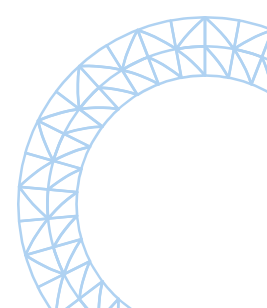

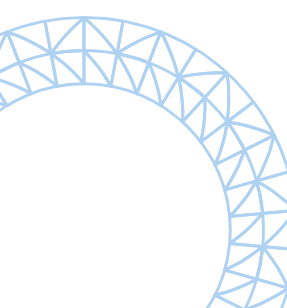

A drought happens when there is very little rain for a long period of time and very precipitation

What conditions are
needed for a
drought to form

*Very dry conditions are needed
to cause a drought. Also very
little water and rain causes
droughts*

where and when drought

occur

*DROUGHTS MAINLY ARE IN
CALIFORNIA, NORTH
CAROLINA, AND WEST
VIRGINIA.*

Is there a scale used to measure the intensity of your weather event?

There is a graph to measure the intensity of droughts. In the scale they show how dry the area is and how that can impact the place that the drought is in. To add to that they show what categories there are in droughts.

How is your weather event
named or classified?

*Droughts were named droughts because the
meaning of drought is a period of time with
very little rainfall.*

What technology is used to monitor your weather event?

They use something called a U.S Drought Monitor. This technology tells whether or not a drought is happening and how bad the drought is.

What effects should someone expect from this type of storm?

Someone should expect that water is gonna be very high and that they will have very dry areas around them and that they can't waist water on things that don't need water.
